STATSTRIP Xpress®2

Glucose Monitoring System Quick Operating Guide for QC Controls

Left Button
Mode Button
Right Button
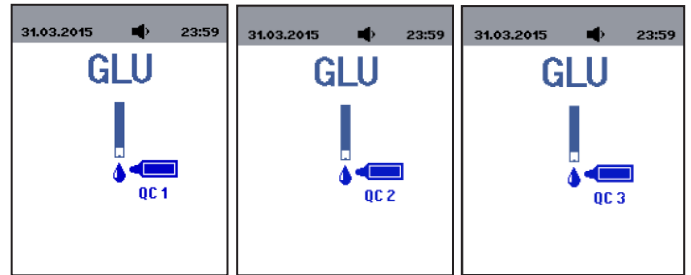

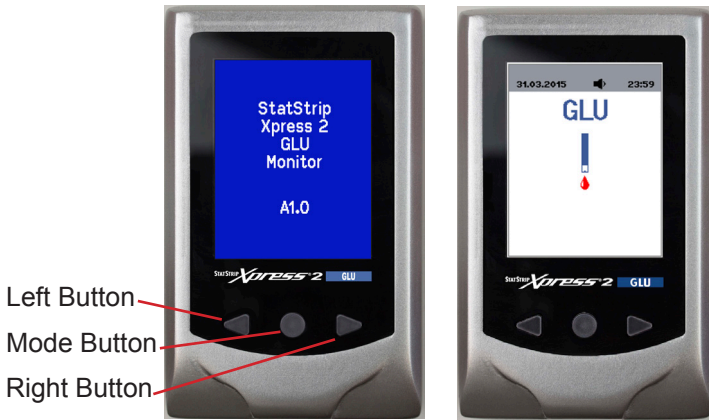

1 The Home screen

2 Insert a test strip into the meter. A test strip with a blood drop will display.

3 Identify the sample as a Control; use the Left or Right button to find the desired control level: QC1, QC2, or QC3. Gently mix the StatStrip Glucose Control Solution before each use.
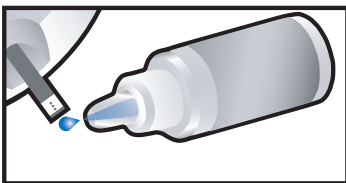

4 Discard the first drop of control solution from the bottle to avoid contamination.
Touch the end of the test strip to a drop of control solution until the test strip fills and the meter beeps.

5 *Warning!*

The test strip strip must fill completely upon touching the QC droplet. **Do not add a second QC drop to the test strip.** Discard the test strip and repeat the test with a new test strip.

Note!
A quick beep sounds when sufficient control solution has been added to the test strip.

6 Recap the control solution.
Glucose quality control results are available on-screen in 6 seconds.
There is one long beep when the results are ready. There are 3 short beeps if test results are outside the range of the test strip.

7 Remove the test strip and discard into an appropriate container.

8 Test results are automatically saved. If no activity for 1 minute, the meter will time-out: screen goes blank.
